Transport trolley for surf boards - has hinged frame on two wheels with surfboard carried on vehicle roof rack clamped to frame

SCHLOGL J G 27.11.80-DE-044595
(03.06.82) B60p-03/10

27.11.80 as 044595 (1283JW)

The trolley consists of a hinged, V-shaped frame, which can be closed to fit into a car boot, and a pair of removable bicycle wheels (3). On the upper edges of the frame shank (2) are U-shaped rails (5), on which the supports (7) for the carrier bars (10) are clamped.

The carrier bars and supports can be a normal vehicle roof rack, thus allowing the surfboard together with the roof rack to be taken from the vehicle and clamped directly to the trolley frame for transportation to the water edge. This method also allows the trolley to be used for any other goods, carried on the roof rack. (9pp Dwg.No.2)
